

Editable source: docs/diagrams/source/context-systems.mmd

Diagram review proof only; not application, provider or client acceptance evidence.

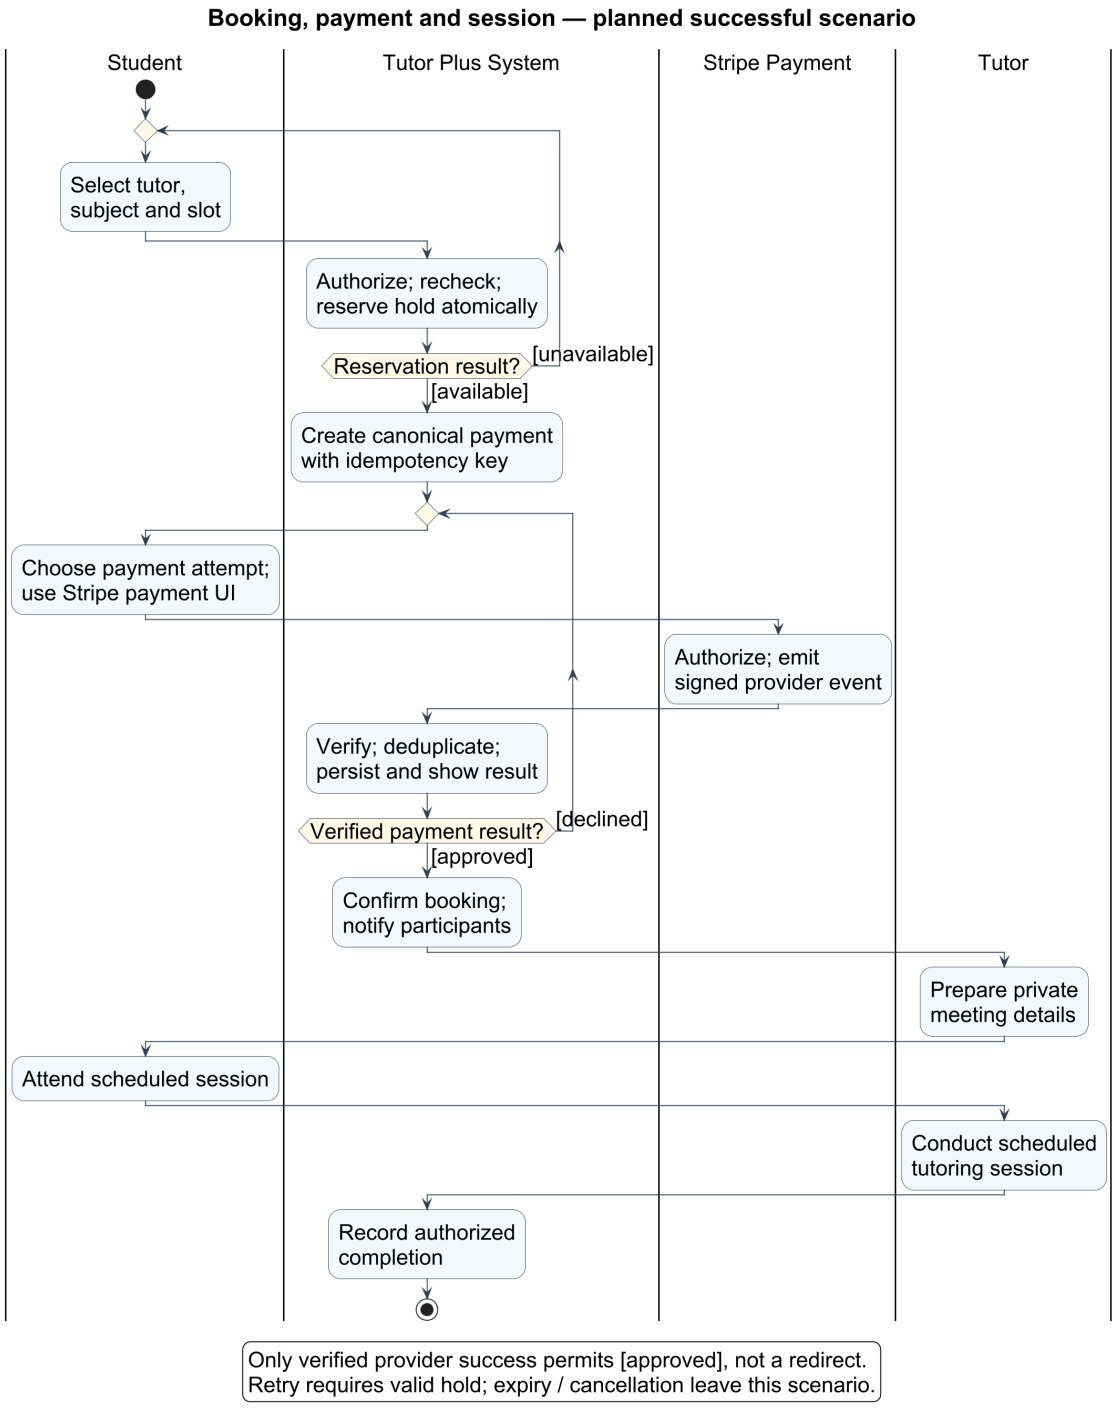

Print-scale proof 2/13: context-stakeholders

Editable source: docs/diagrams/source/context-stakeholders.mmd

Diagram review proof only; not application, provider or client acceptance evidence.

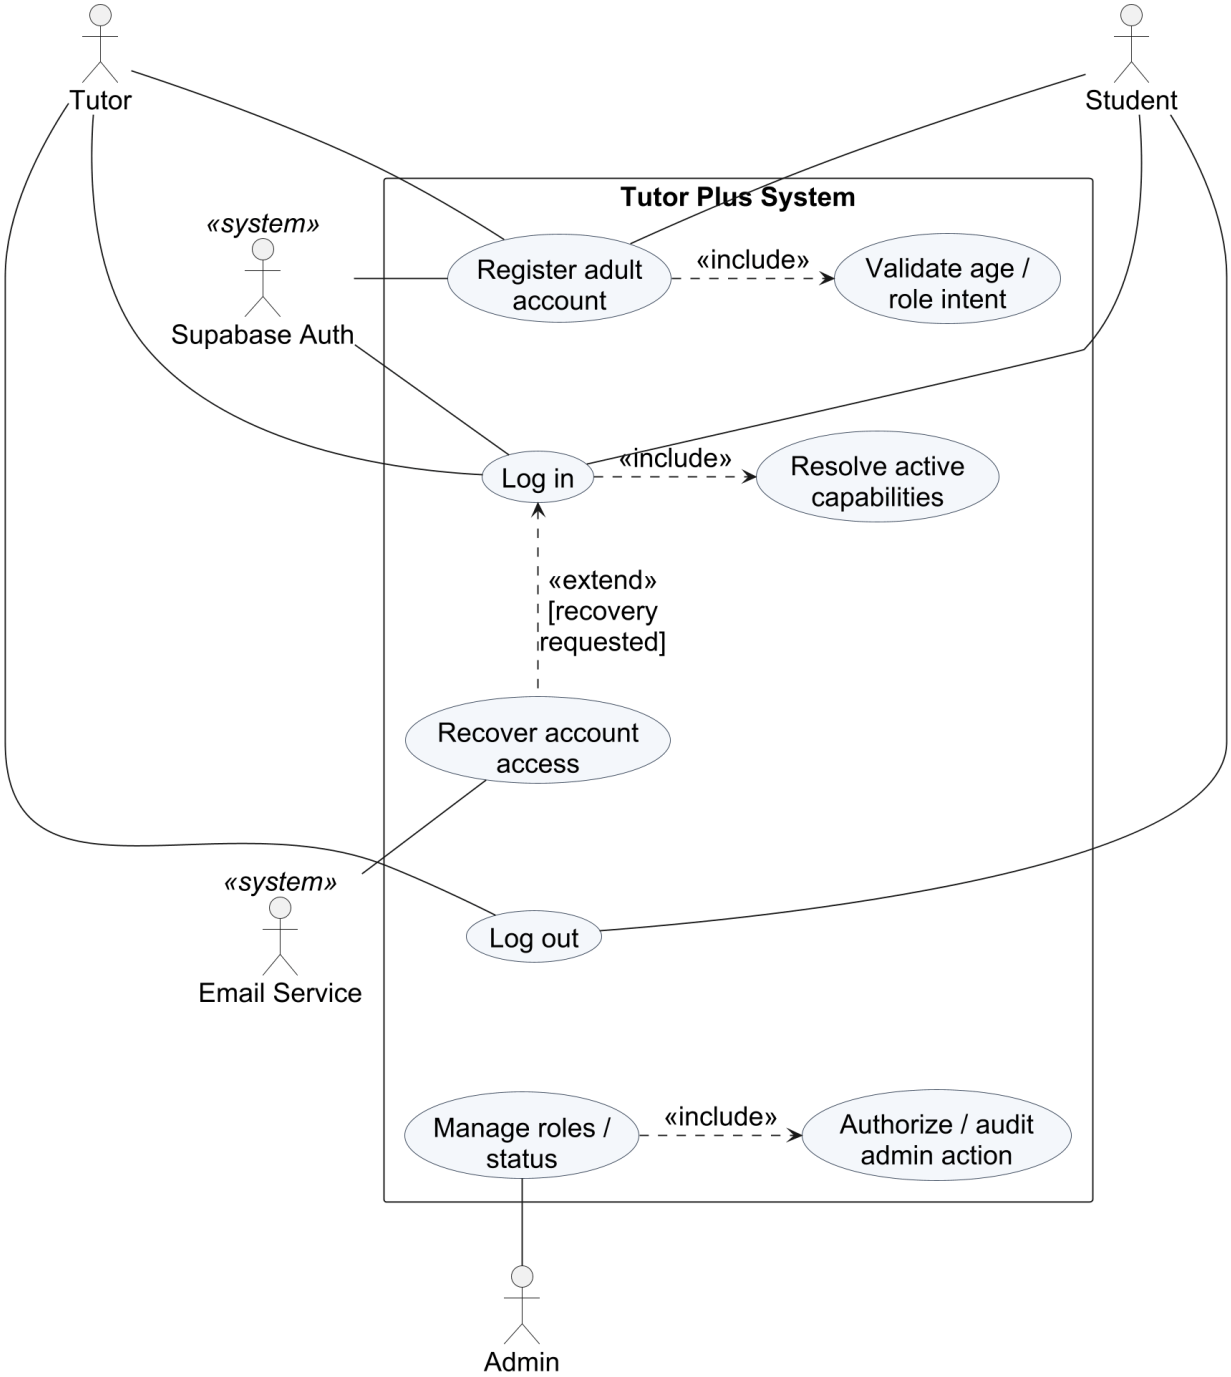

Print-scale proof 3/13: activity-booking-payment

Editable source: docs/diagrams/source/activity-booking-payment.puml

Diagram review proof only; not application, provider or client acceptance evidence.

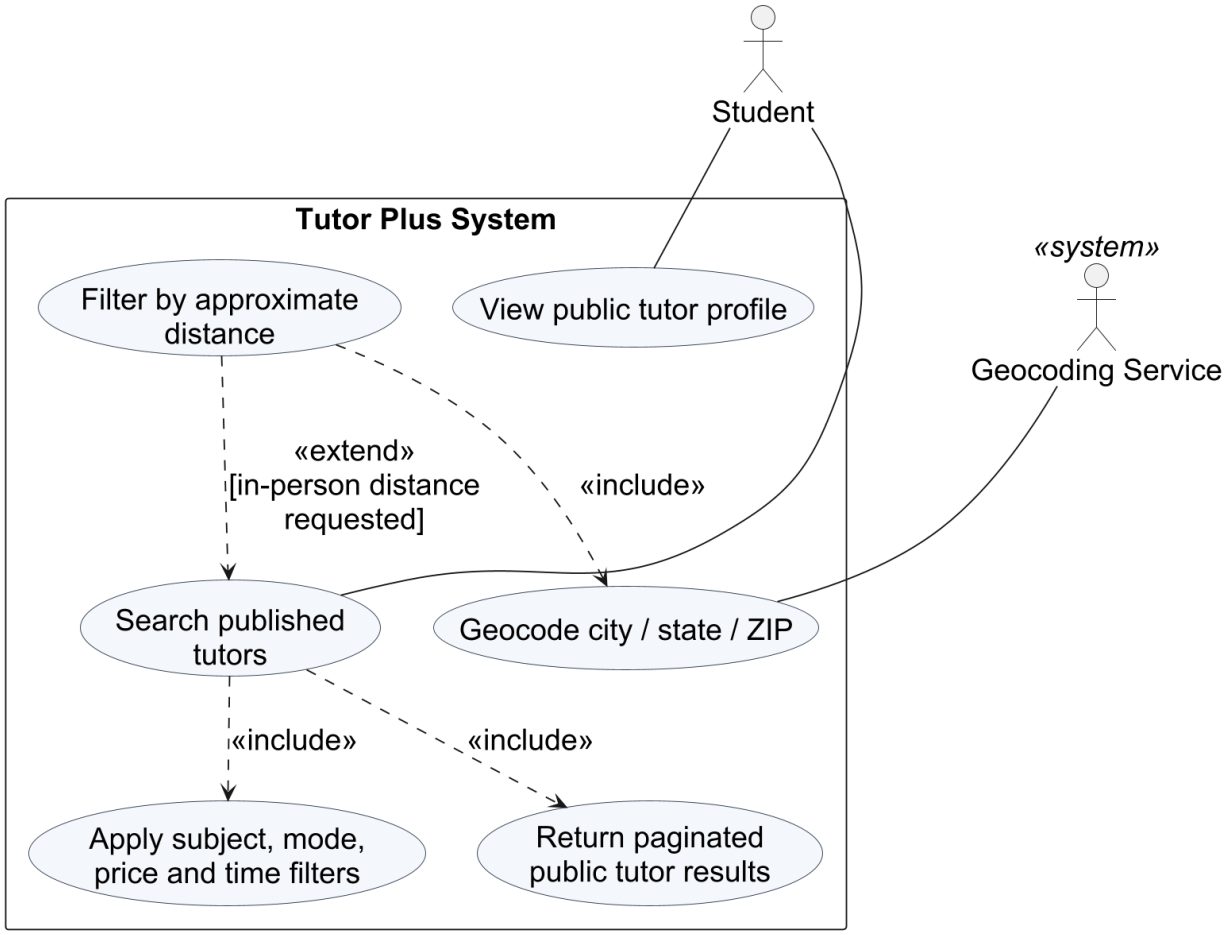

UC-01 — User Management

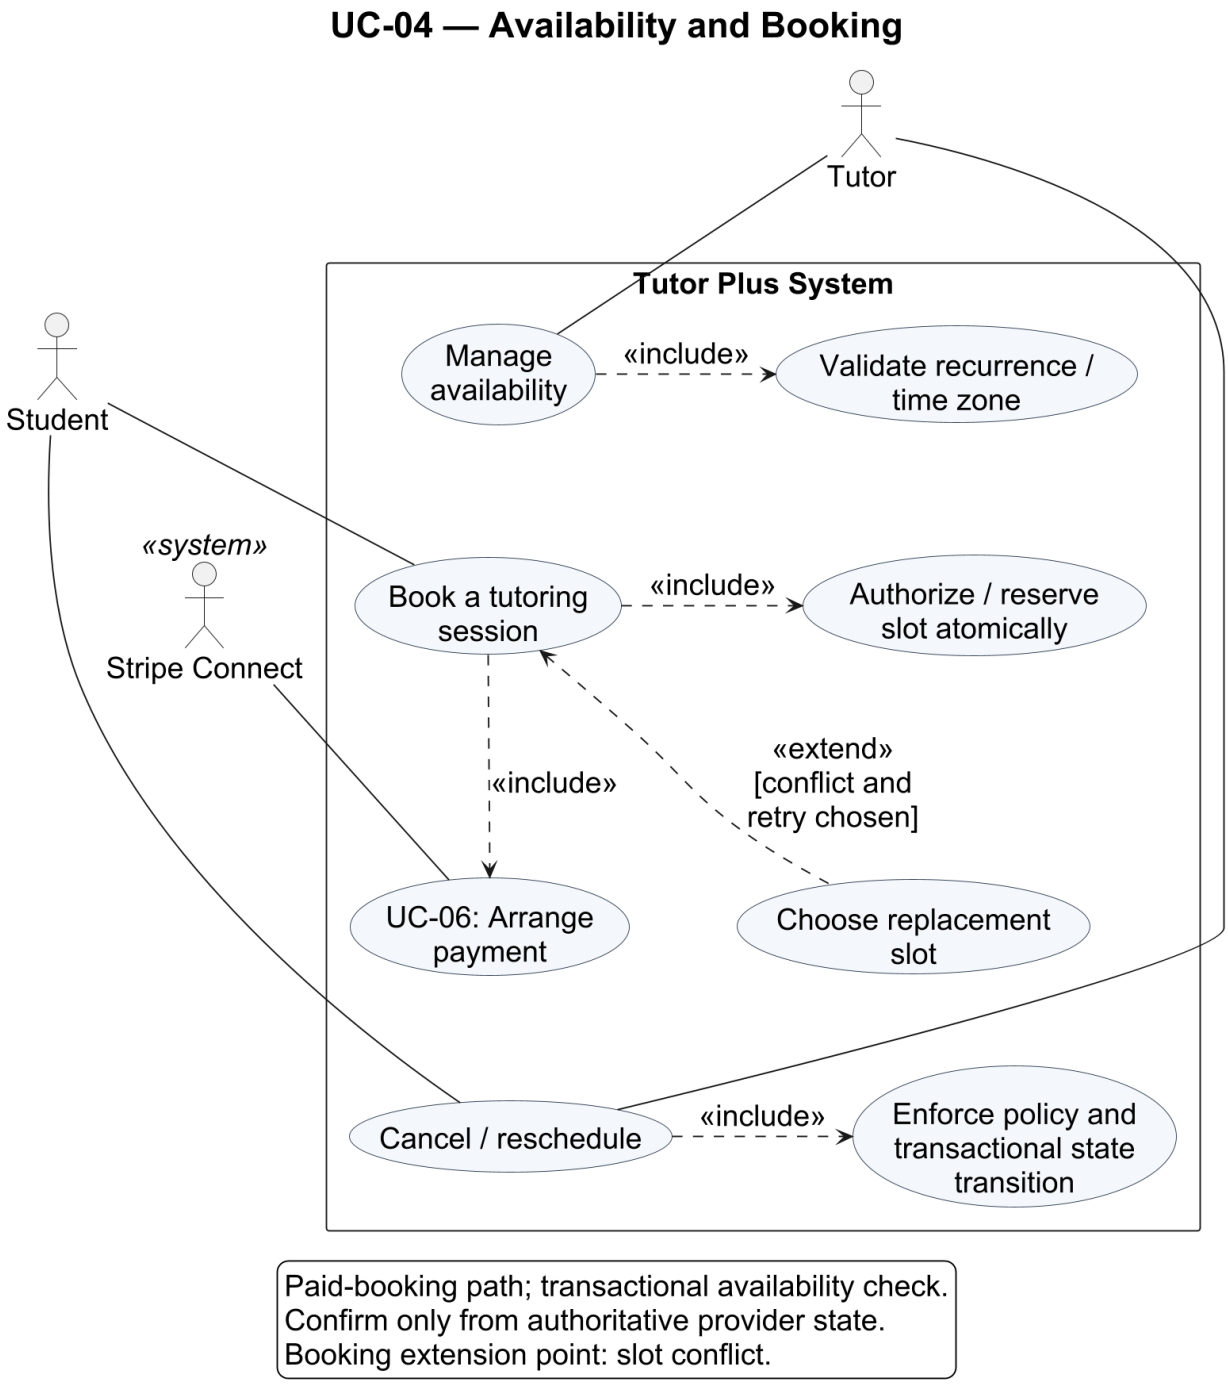

Editable source: docs/diagrams/source/usecase-uc01.puml

Diagram review proof only; not application, provider or client acceptance evidence.

UC-03 — Search and Discover Tutors

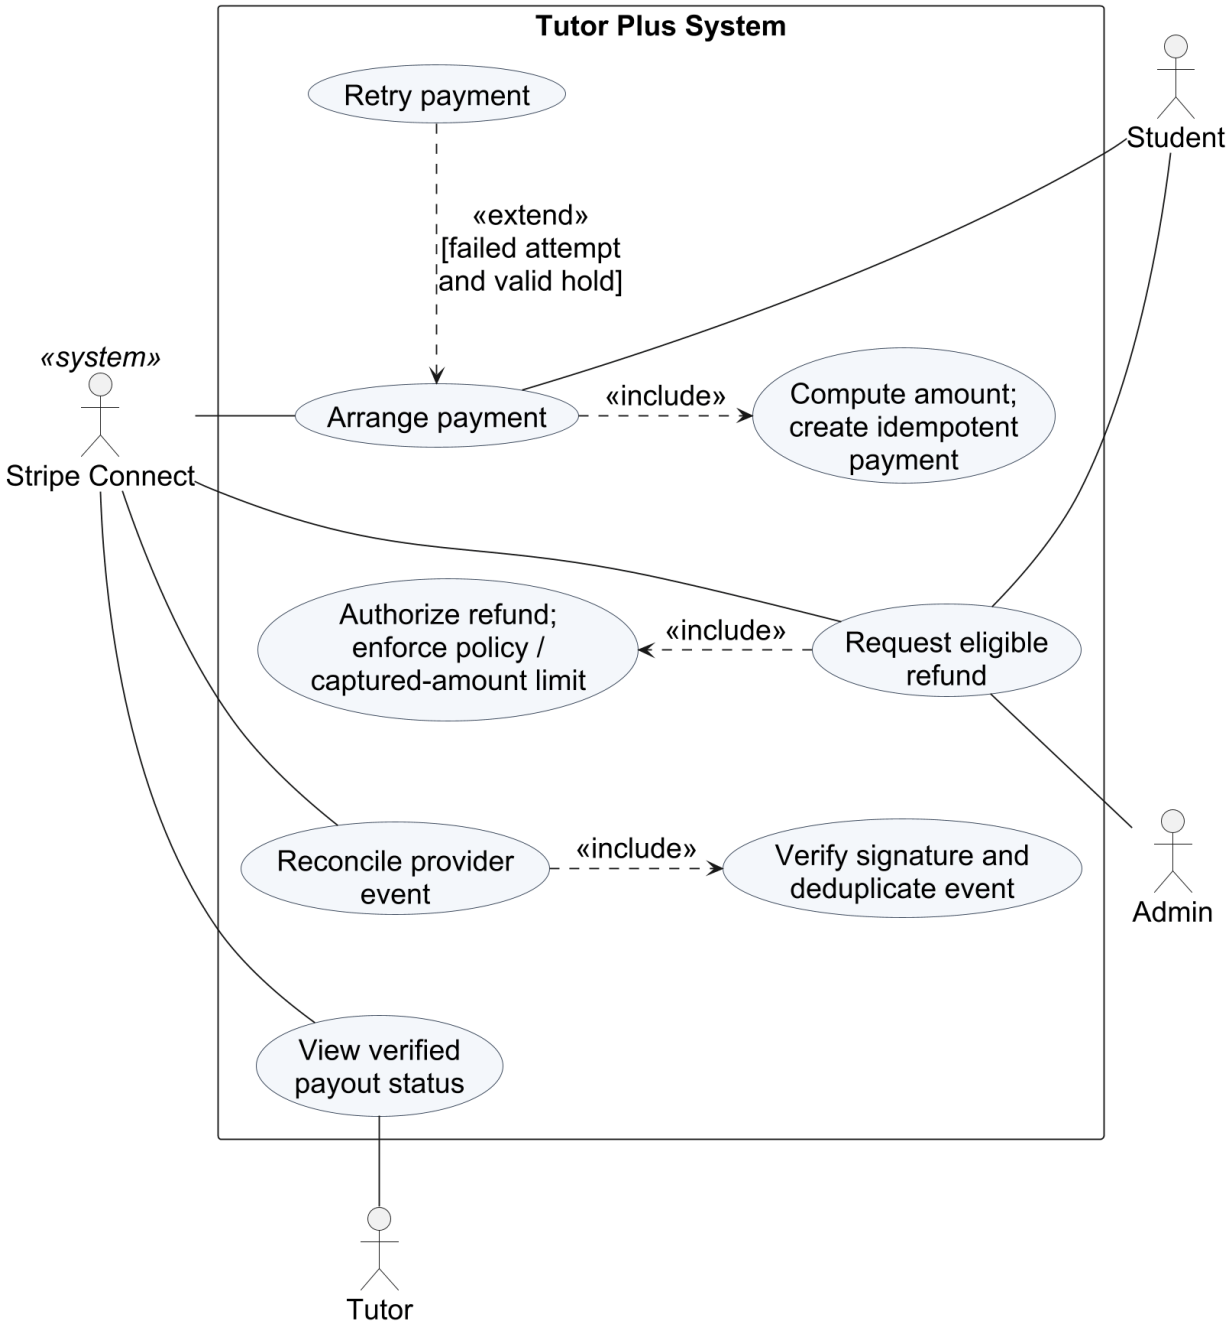

Browser location is optional and permission-based.
Manual location remains available; no public exact address.
Search extension point: location filter.

Editable source: docs/diagrams/source/usecase-uc04.puml

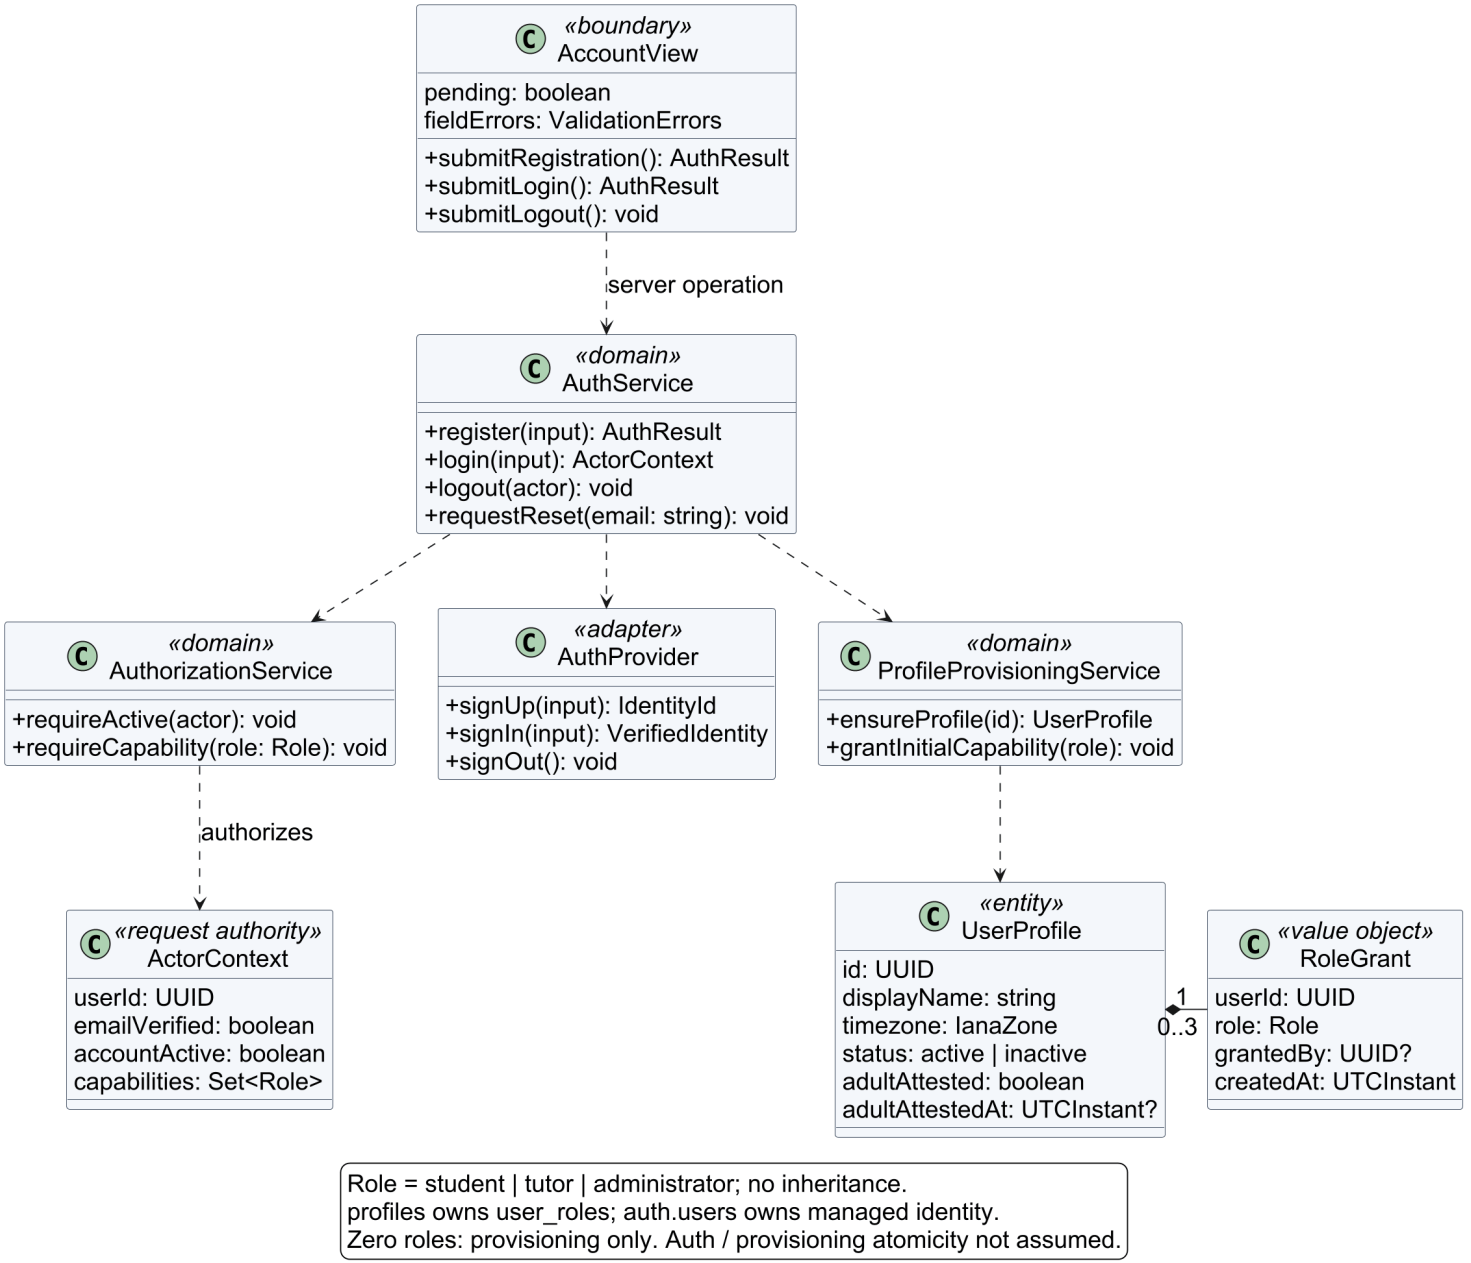

Diagram review proof only; not application, provider or client acceptance evidence.

UC-06 — Payments and Refunds

Webhook reconciliation is asynchronous, not a UI include.
No raw card storage; Stripe is payment / payout authority.
Payment extension point: failed attempt.

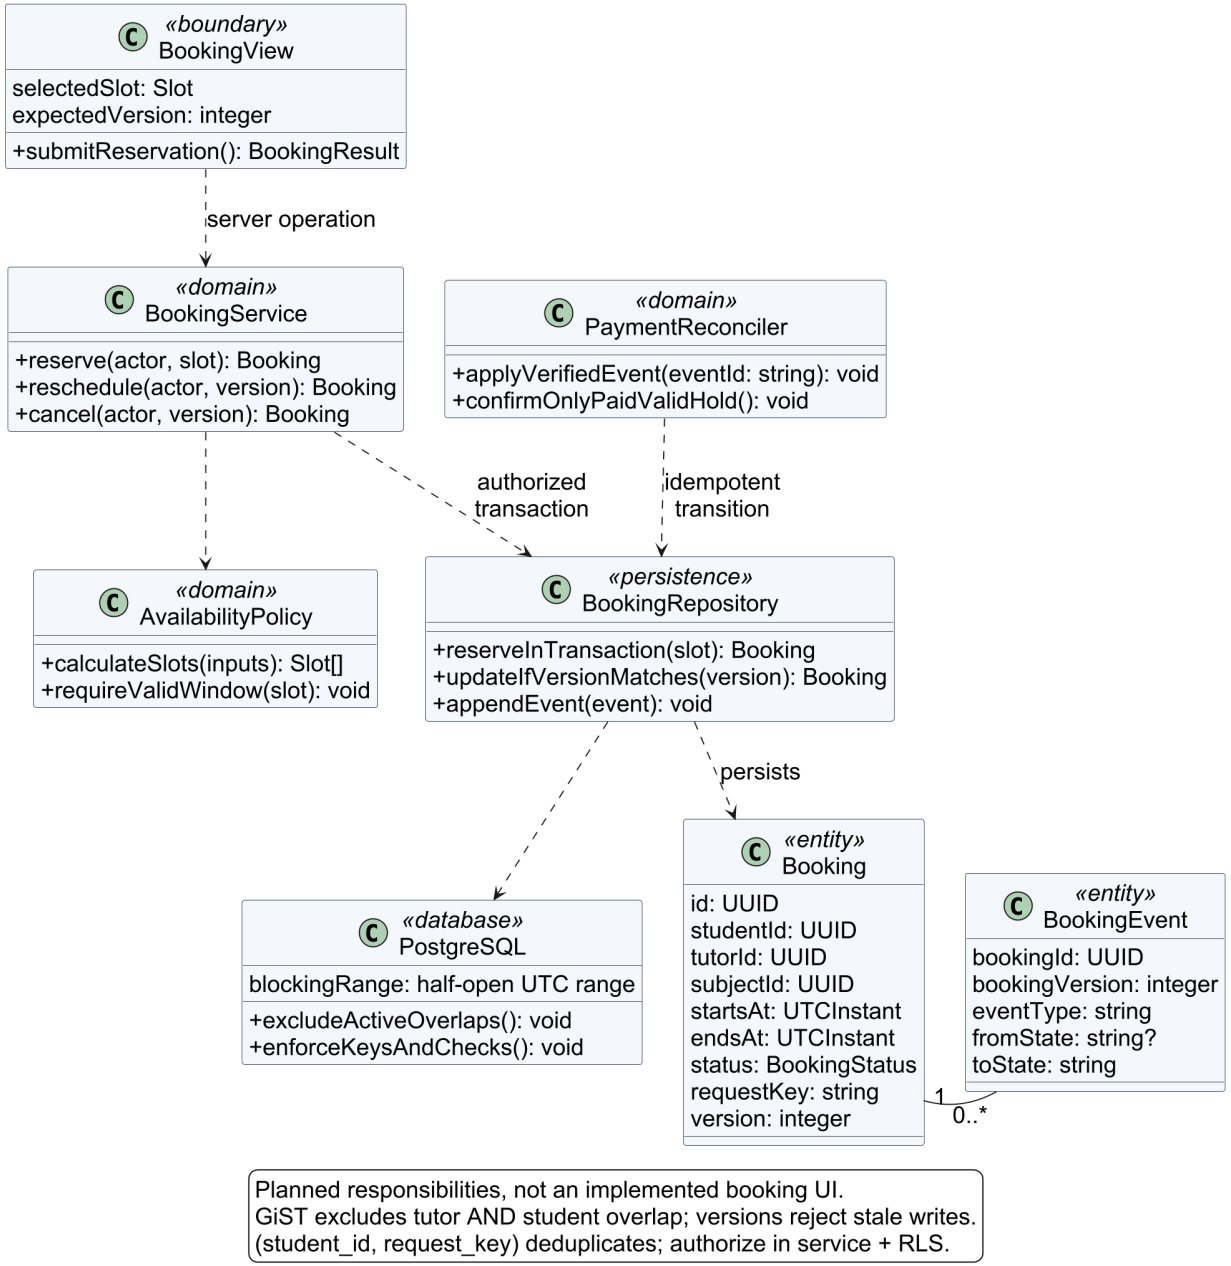

UC-01 — Account identity and composed capabilities

Editable source: docs/diagrams/source/class-uc01.puml

Diagram review proof only; not application, provider or client acceptance evidence.

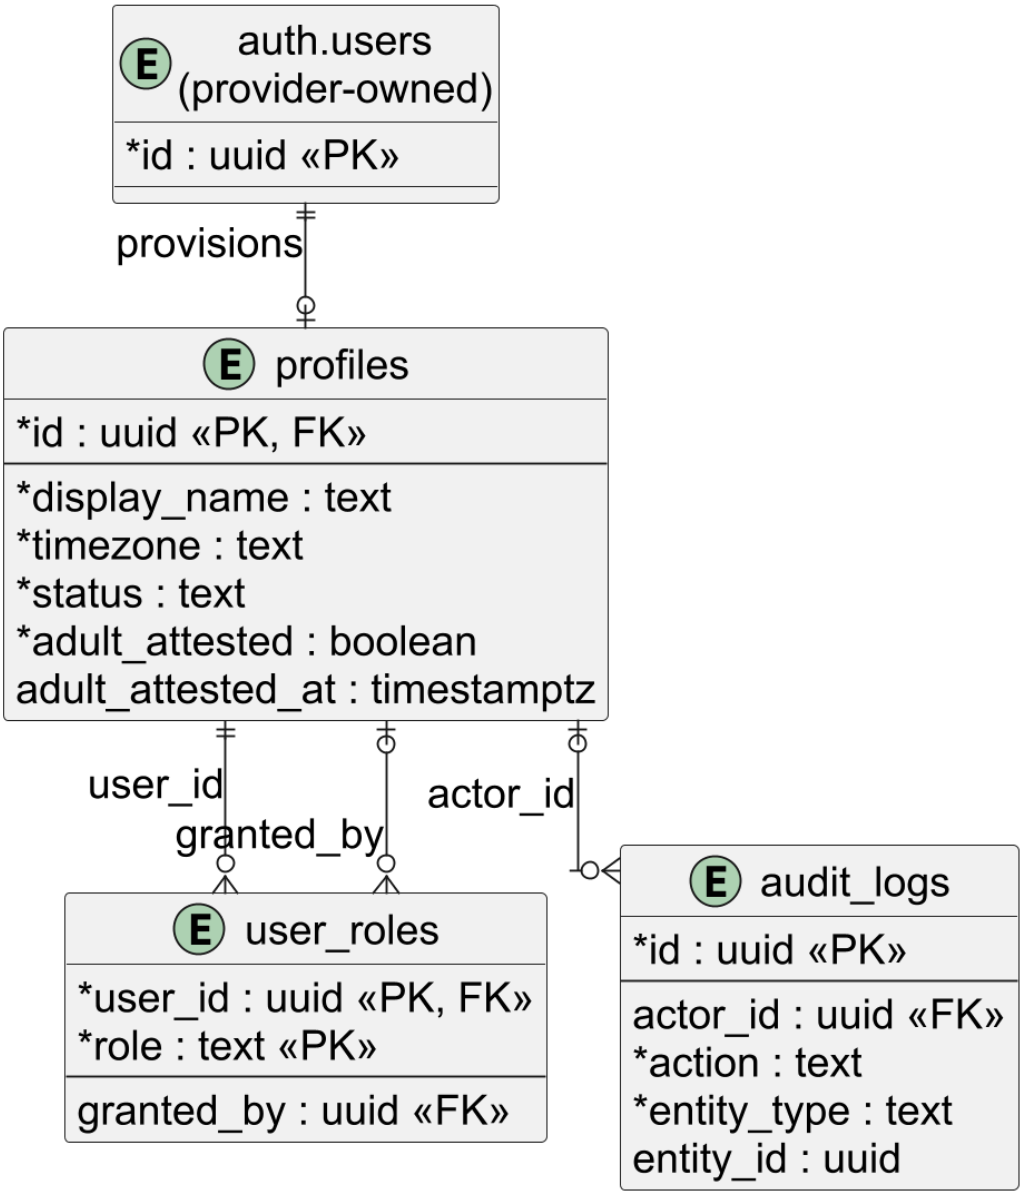

UC-04 — Booking persistence and concurrency boundary

Editable source: docs/diagrams/source/class-uc04.puml

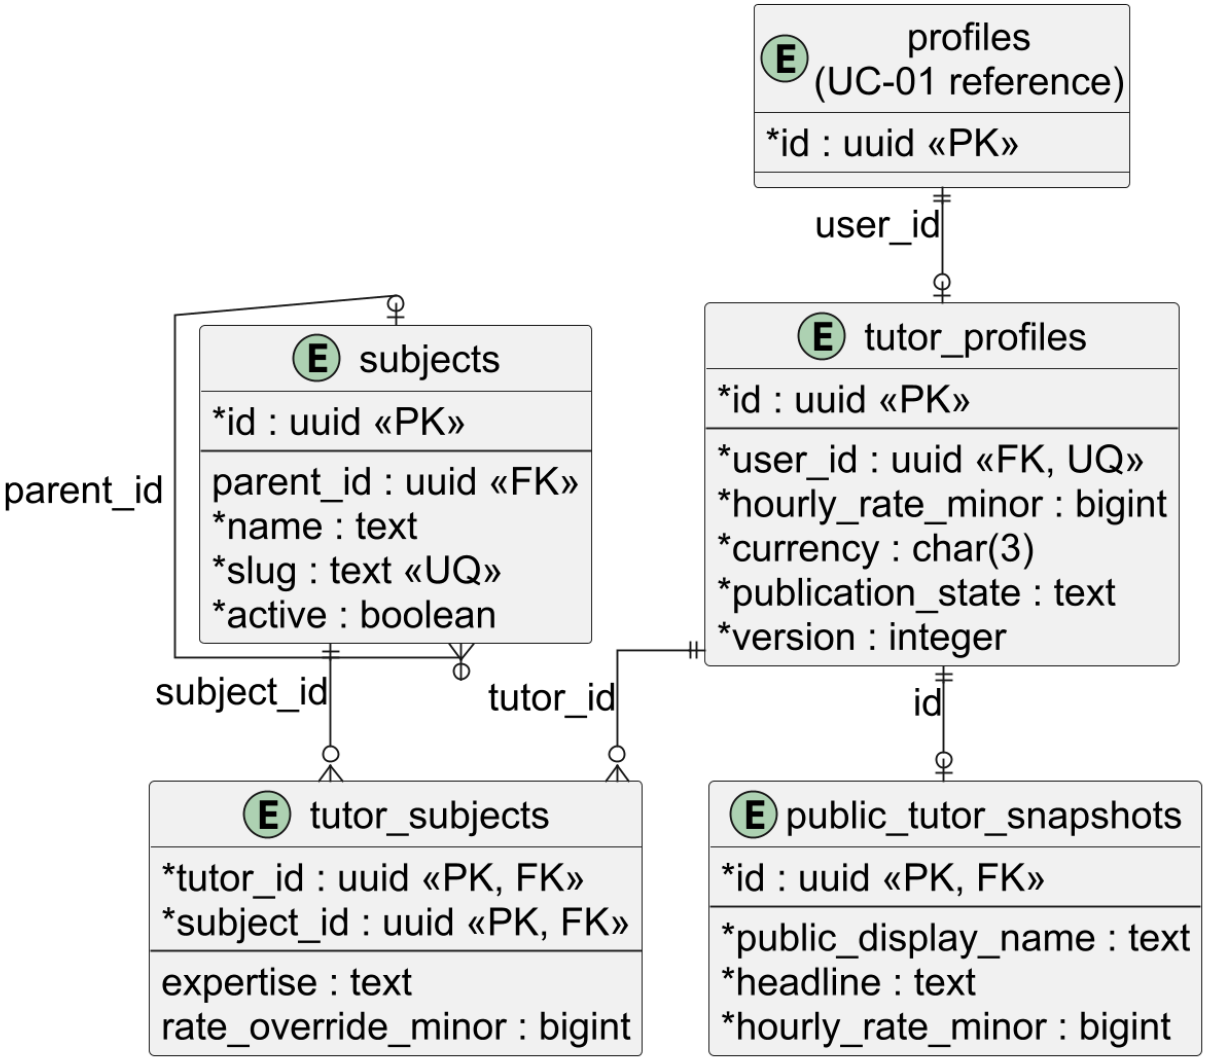

Diagram review proof only; not application, provider or client acceptance evidence.

UC-01 — Identity and capabilities (SQL group)

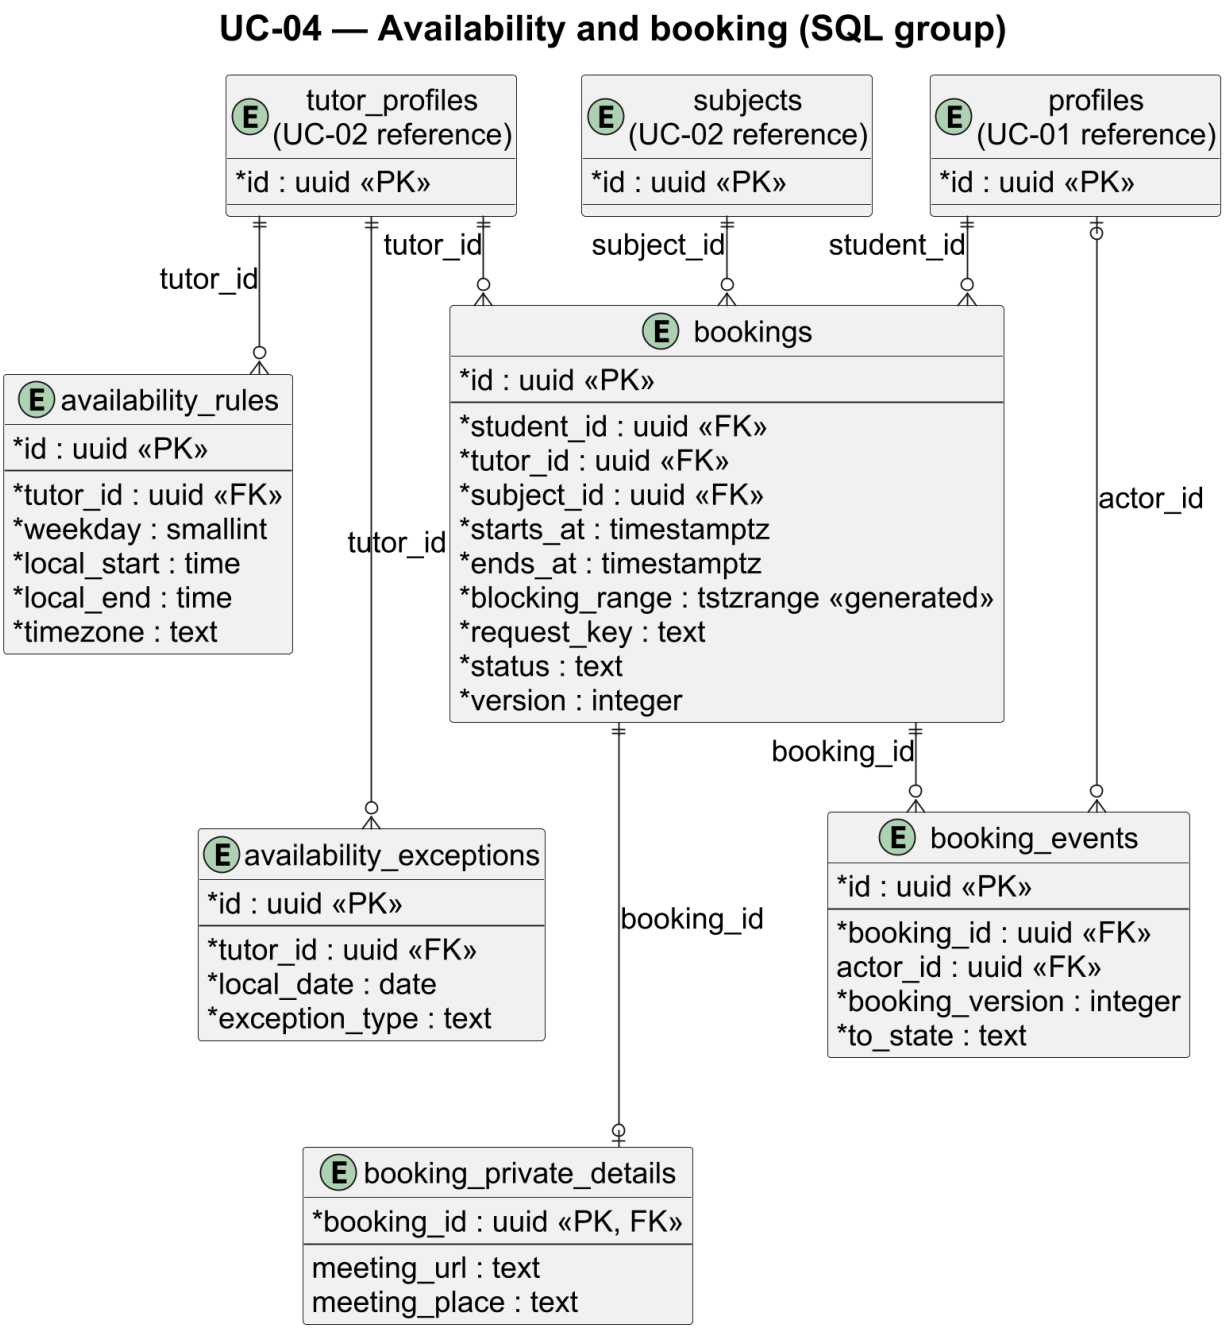

Required fields marked *; omitted descriptive / timestamp fields remain in the full database dictionary and migration.
user_roles key = (user_id, role); capabilities may coexist.
Optional profile during provisioning; exactly one on success.
entity_id is typed audit metadata, not a general foreign key.

UC-02 — Profiles and teaching subjects (SQL group)

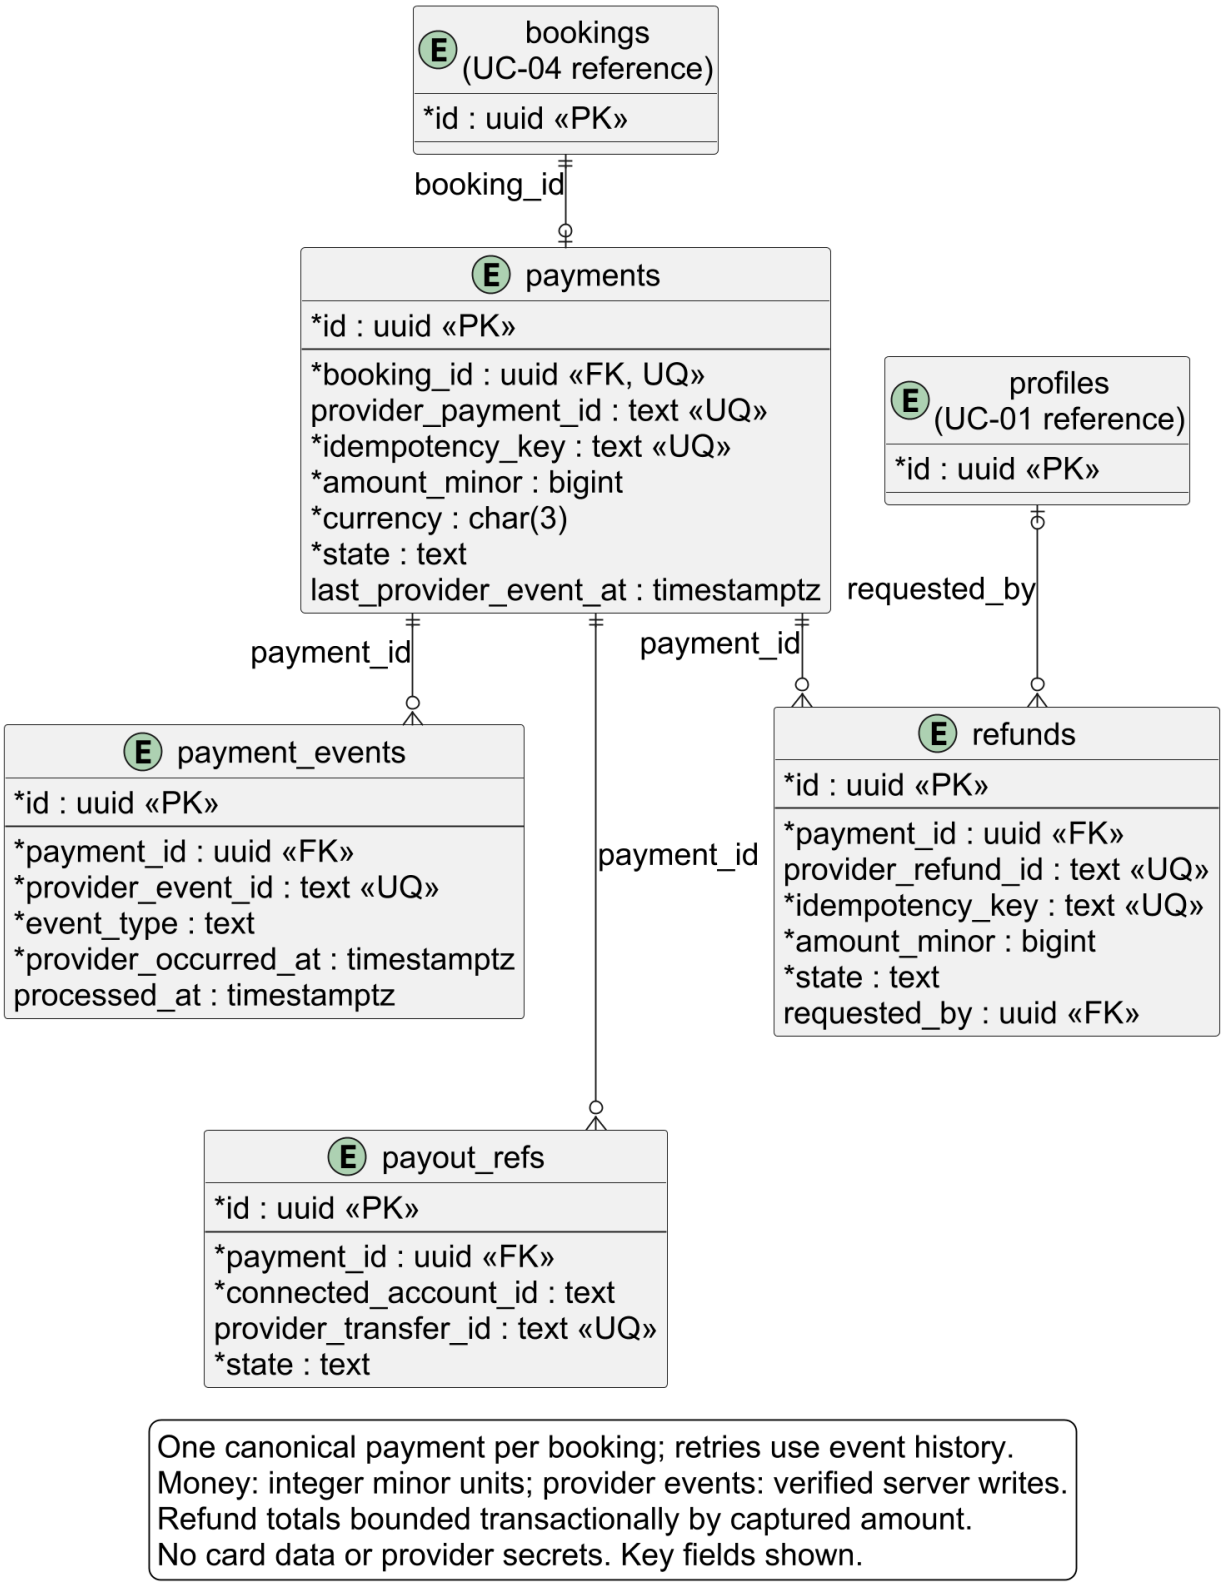

Student preferences stay in profiles; no student_profiles table.
Snapshot is a trigger-maintained safe projection, not identity.
Public reads still require publication / readiness policy.
Availability readiness is a dependency on the UC-04 group.
Key fields shown; full columns remain in SQL / dictionary.
